GEIDEA

Version History

Version	Date	Changes
1.0	12-04-2021	Initial version
1.1	06-05-2021	Apple Pay instruction added

Contents

Introduction

Tested on PHP v.7.2.
In using PHP v.7.1 or lower, the plugin's correct work can not be guaranteed.
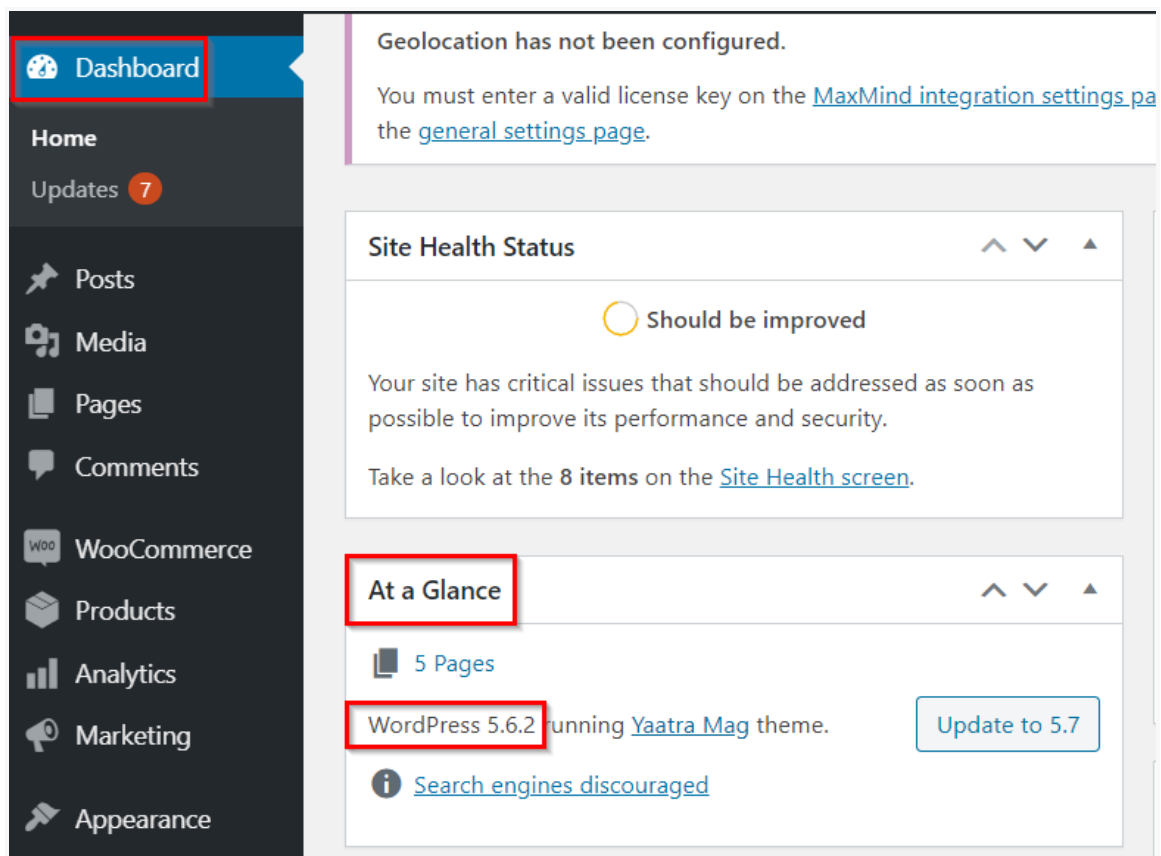

The latest version of the Geidea Payment Gateway Plugin you can get from the repository. (*URL is needed*).

Please note: every software or plugin update can not guarantee good work on your hosting, so please backup your website before updating. That will allow you to restore from backup in case of troubles. Software and plugin update means programming code changes. It may request the server or PHP version changing as well.

All plugin versions you can get on this page (for example, https://wordpress.org/plugins/{*plugin_name*}/#developers).
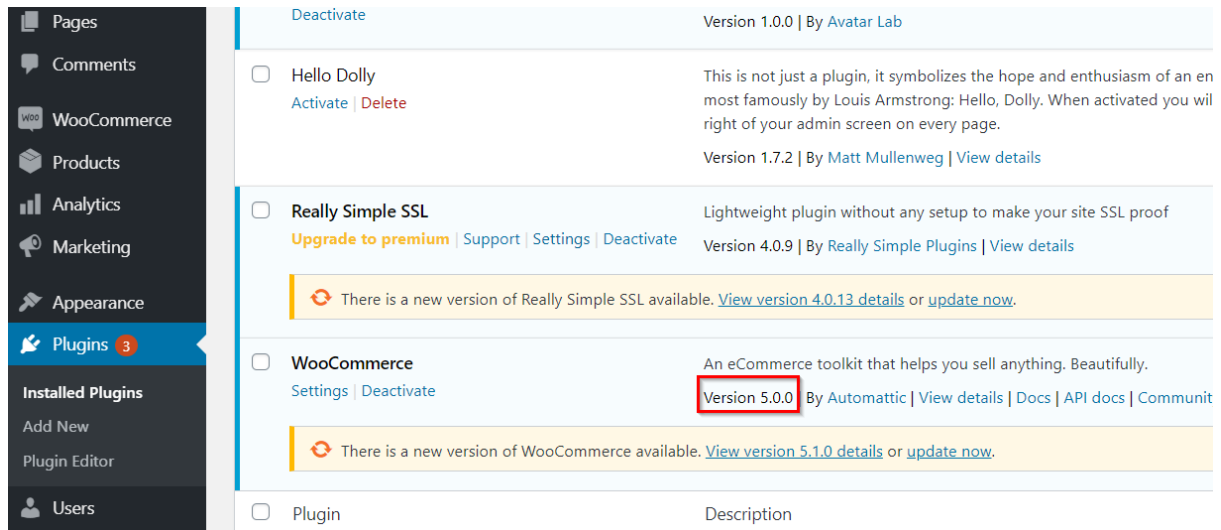

Where to get your CMS and plugin versions?

To get your WordPress CMS version, go to the WooCommerce admin panel at http://your_site/wp-admin/. On the home dashboard, go to the "At a Glance" section:

To get your Geidea Payment Gateway plugin version, go to the admin panel at http://your_site/wp-admin/. Choose the "Plugins" menu on the sidebar, go to the WooCommerce section:

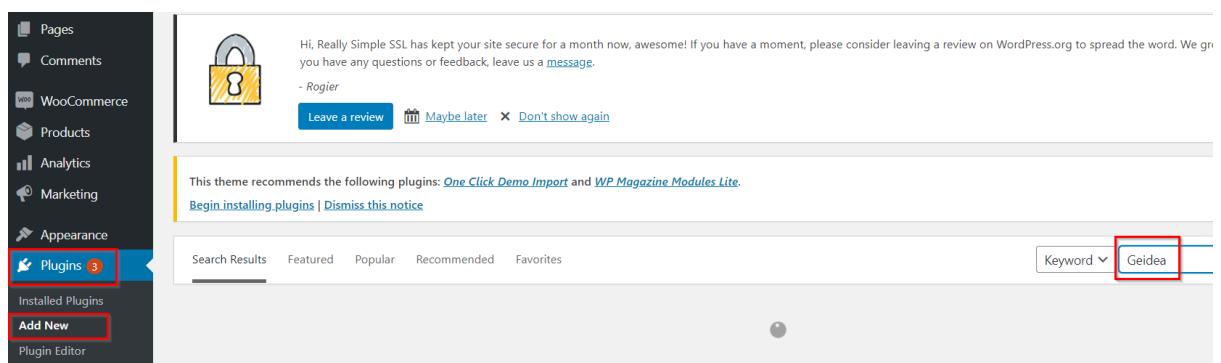

Plugin installation

There are two ways to install the plugin:

- by using plugin install in WooCommerce admin panel
- by downloading an archive from the repository

1. WooCommerce plugin market

To install the plugin on the WooCommerce admin panel, go to "Plugins" on the left sidebar, then choose "Add new". Enter the keyword "Geidea'' in the search bar and click "Install.":
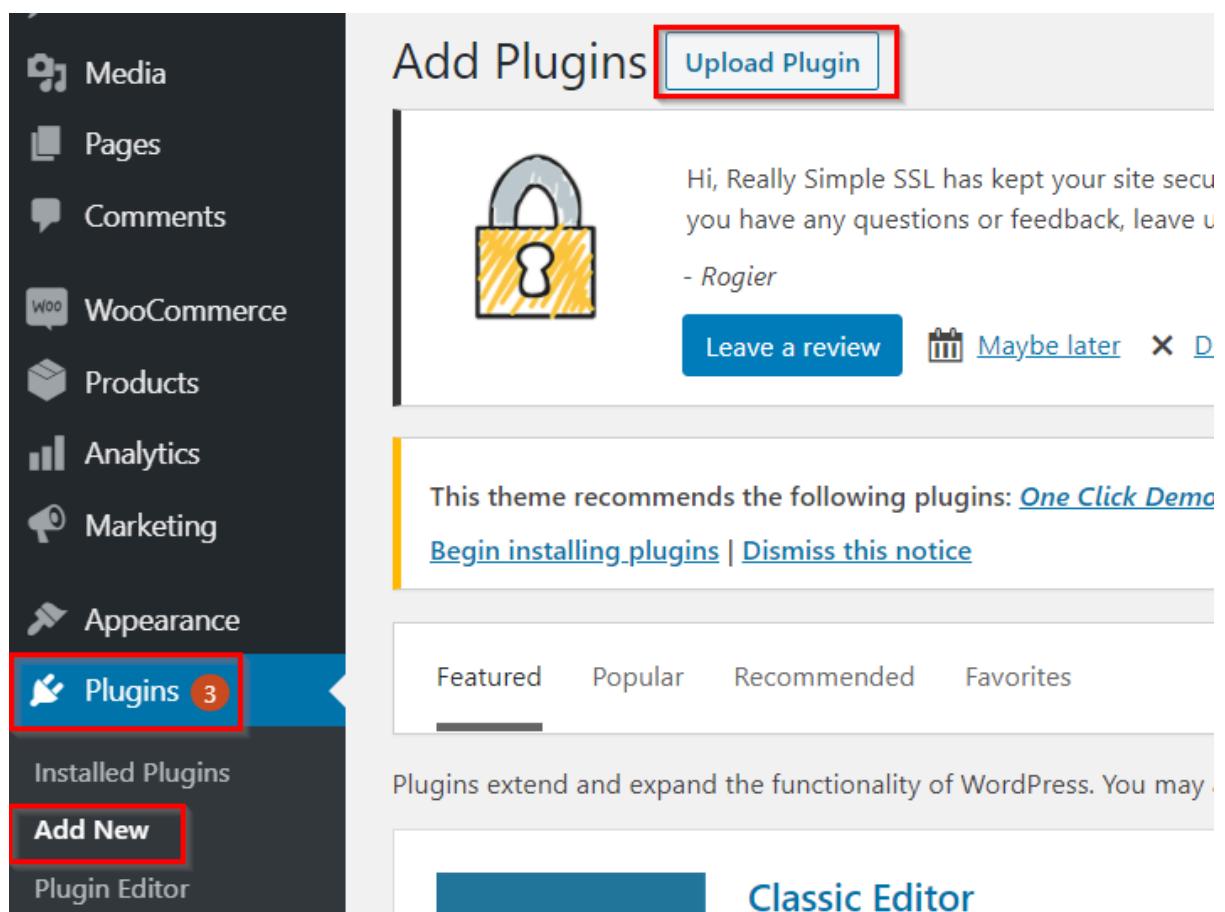

2. Installation using a plugin archive file

To install using the second way, please download an archive with the plugin. Go to (URL needed here):

repository screenshot

Download the archive file to your computer. To install the plugin, you need to unpackage the archive file; it contains an installation manual.
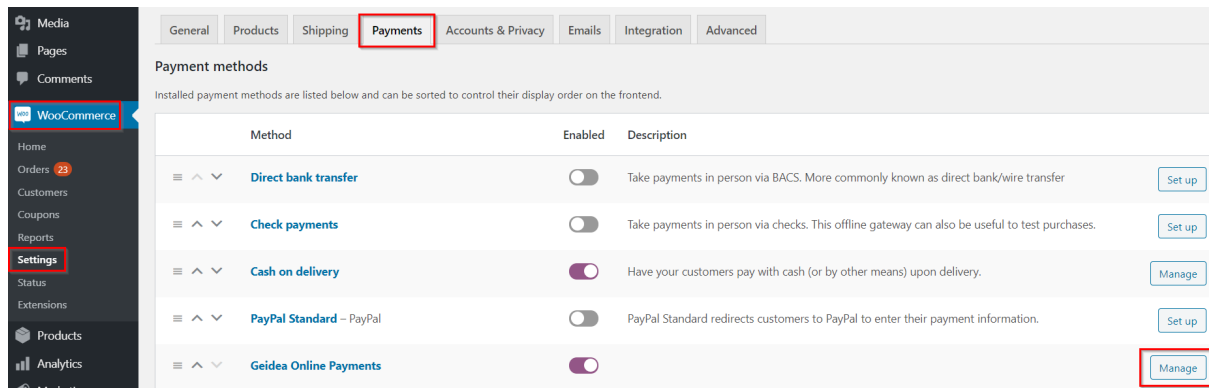

Next, go to the WooCommerce admin panel of your website http://your_site/wp-admin/, go to "Plugins" on the left sidebar -> "Add new". Click "Upload plugin":

Next, click «Choose File», find the archive file downloaded previously to your computer. After plugin installation, click «Activate» on the same page.

Plugin setup

Go to «WooCommerce» -> «Settings» -> «Payments»:

Click the "Manage" button next to the «Geidea Online Payments» plugin and enter the following credentials:

- Merchant gateway key
- Merchant password
- A currency identifier by default

Some of them can be entered by default. Please note that without entering these credentials, the plugin is inactive.

Fields description:
- **Merchant gateway key** - merchant ID, which you can get by registration on https://merchant.geidea.net/;
- **Merchant password** - merchant password, which you can get from Geidea;
- **Currency identifier** - currency by default (usually, it's a currency of the store). You can get all supported currencies from Geidea;
- **Logo** - logo of the payment method;
- **Header Color** - you can set up the header color by entering its HEX-code;
- **Order status after success payment** - order state applied in case of successful payment on Geidea Payment Gateway side;
- **Order status while waiting for payment** - order state applied in case of pending payment on Geidea Payment Gateway side.

Finally, click "Save changes" at the bottom of the page.

The Geidea payment gateway provides the option to utilize Apple pay for e-commerce payments for its users. Please contact a Geidea operator for more details on how to configure Apple pay.

Once you receive the domain association file from Geidea you need to host it at /.well-known/apple-developer-merchantid-domain-association on your site.

For example, if you're registering https://example.com, make that file available at https://example.com/.well-known/apple-developer-merchantid-domain-association.

Next, tell the Geidea that the file has been successfully hosted.
